Preparing for an Examination**

As with any examination, it is important to be prepared. The more knowledge you have about the classification and its requirements being examined for, the better you will do in the examination. Below are critical steps to assist you in preparing for an examination:

- It's never too early to start preparing. Mentoring and training should be taking place everyday in the workplace. Don't wait for an exam bulletin to be advertised before you begin to prepare for your next promotional opportunity. Your interest in your job, willingness to volunteer for additional/special assignments and eagerness to learn different tasks will provide you with invaluable knowledge. The total package - education and experience - is what provides you with the expertise to respond to the job related questions that are asked during your exam.
- Read the entire examination bulletin. Pay special attention to the section titled, "Examination Plan." The section will explain what type of examination will be administered (i.e., written test, Qualification Appraisal Panel, Supplemental Application, etc.). This section will also explain the scope of the examination. The scope identifies the knowledge, skills and/or abilities required to be successful on the job. It is very important that you are familiar with the knowledge, skills and/or abilities of the classification because they are the basis for the examination questions.
- Review the Job Analysis for the classification being examined. The Office of Selection Services (OSS) conducts job analysis for every examination administered prior to the examination. The most critical and frequently performed tasks are identified in the job analysis in addition to the knowledge, skills and/or abilities for the classification. Job analyses can be found on the CDCR Intranet and Internet pages under Career Opportunities, or a hard copy can also be obtained by visiting OSS.
- Review and study the classification specification. This is the legal document for the classification and states how the classification is used in general, states the knowledge, skills and/or abilities required and states any other pertinent classification information. The classification specification can be found on the State Personnel Board's (SPB's) website at www.spb.ca.gov.
- Ask where the classification is being used to broaden your understanding of the classification by either talking to an incumbent currently in the position you are examining for, request copies of duty statements or shadowing people working in the classification. Oftentimes, the individuals currently performing the duties of the classification can provide you with insight of the actual on-the-job tasks.
- Acquaint yourself with the mission and goals of CDCR, which are available on the departmental Intranet and Internet sites. Learn as much about the department and/or the various locations within the department that utilize the classification you are testing for. Remember, your classification may be used in other locations/units other than your own and may perform different tasks in different ways. This will give you a better understanding of how the classification is used and will help you formulate better job-related responses to the questions.
- Be in the role. Ensure you answer questions from the standpoint as if you were already in the current classification or level you are testing for. Oftentimes, candidates answer questions from their current classification or level of experience. As an Associate Governmental Program Analyst (AGPA), you may have broad technical experience, however, you will need to be prepared to answer supervisory related questions when testing for Staff Services Manager (SSM) I. For example, an AGPA testing for a SSM I exam should respond to the questions by explaining how you would "direct your staff" rather than actually performing the tasks yourself. A trainee classification when taking a full-journey level exam, should look at the questions and responses as being able to perform the tasks with little or no supervision – you are the expert. There are many areas that are covered in an exam – do your research and allow time for preparation.
